

ISA ACTIVITY-1

Let's Connect to Our Global Friends (In House Activity)

The project 'Let's Connect to Our Global Friends' under ISA had a great impact on the children and satisfied their curiosity about cultures prevailing in different countries. They became familiar with the greeting phrases, gestures, capitals, flags, monuments and currencies of India, China, Spain and France, thereby carrying forward their knowledge to international level.

Many interesting activities such as tiffin sharing, greeting making, speech, presentation, role play and let's check worksheet were organized for the students. These activities not only built the confidence

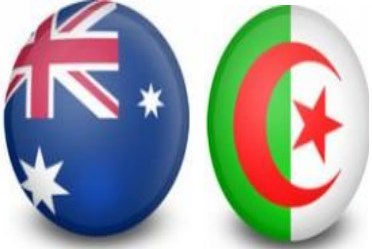

of the children but also promoted international learning. The school conducted this ISA activity for class 3 & 4 in the month of August 2018.

The students exhibited their artistic skills and exchanged beautiful greeting cards on friendship day. This promoted the feeling of universal brotherhood.

The Tiffin sharing activity was conducted in the lunch break. Students sat in groups and exchanged their lunch with each other.

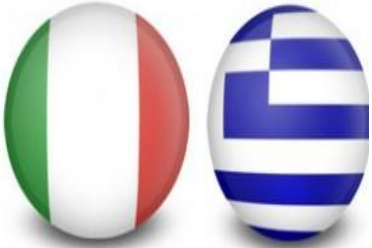

This activity helped in developing the spirit of oneness. A speech activity was conducted in mass assembly. This activity helped the students in understanding that diversity in culture cannot divide us, it brings us all together.

The activity - A PowerPoint Presentation provided complete information of greeting phrases, gestures, capitals, flags, monuments and currencies of India, China, Spain and France. Young students of the school showed their exuberance and

excitement and actively participated in the activity.

The role play activity enhanced their communication skills and boosted their morale. The students were divided into groups to work collaboratively. A greeting song in Hindi was

performed by the students wearing Indian traditional attire to attribute our cultural heritage whereas in role play they dressed in traditional attire of France, India, China and Spain. The students conversed with each other using the languages of respective countries.

To sharpen the skills to solve various scenarios, a worksheet containing queries related to audio recognition, match making and fill ups was taken.

The most effective part of this project was the global connection that the students made by learning about the various countries of the world.
